Wireless messaging for GroupWise®

"Novell is pleased that Messaging Architects and Extended Systems are delivering a fully wireless sync solution for GroupWise. Mobile messaging has always been a strong point for GroupWise, and GWAnywhere is making GroupWise collaboration even more accessible to our customers."

Ed Anderson, Vice President of marketing for Novell's Nterprise Platform Services group

Today's business environment demands effective communication and collaboration throughout the entire organization. Enterprises have invested millions to implement communication and collaboration tools to improve the productivity and efficiency of their desk-based workers. Until now, however, mobile workers - and that's up to more than half the employees - have been left behind. Most organizations find that it's too costly and complex to equip this large employee group with email and calendaring capabilities.

The GWAnywhere advantage

In order to succeed in today's Mobile Information Society, organizations must find ways to empower this important employee group by enabling them to communicate and collaborate electronically.

GWAnywhere is an enterprise-level Always-On-Always-Connected-Always-Synched wireless messaging solution for GroupWise. Its real-time sync server technology provides 100% secure Always-On-Always-Connected synchronization across any type of Palm, PocketPC- or Symbian-powered device, on any type of network and connection (GPRS, CDMA, GSM, WiFi, Bluetooth, or Cable/Cradle). Welcome to the next generation of messaging for GroupWise!

Features

- Synchronizes PIM (Personal Information Management) data on Palm, Pocket PC, Smartphone, Windows CE mobile devices with GroupWise 6.5 server
- Synchronizes database data from any ODBC- or ADO/OLE DB-compliant DBMS to common databases on the Palm, Pocket PC, Windows CE mobile devices, and any 32-bit Windows desktop/laptop/server
- Provides an always-on delivery with Live Connect technology to allow users to always have up-to-date information on the mobile device
- Manages data and applications on mobile devices with backup/restore, installation, configuration, and reporting capabilities
- Ensures secure data transfer with encryption Supports any wired or wireless connection, such as infrared, Ethernet, 802.11, and analog or wireless modems
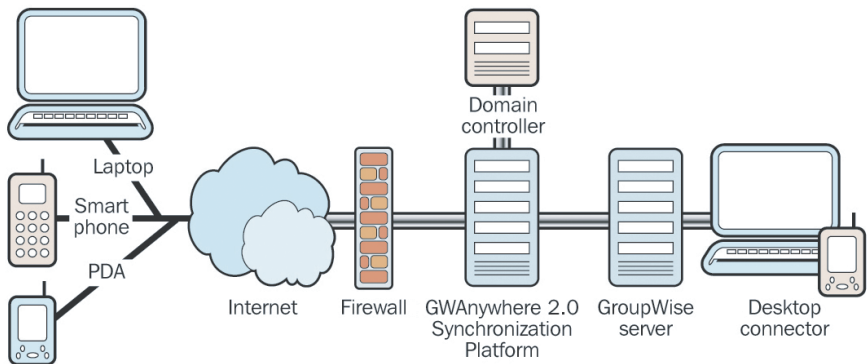

Direct Benefits

- Enterprise-class solution with integrated wireless access allowing employees to stay always connected with the office wherever they are
- Supports any mobile device: Palm, Pocket PC, PDAs, Smartphones, browser-based devices (WAP phones, laptops) and SyncML
- Any connection-wired or wireless: GPRS, GSM, CDMA/1XRTT, Bluetooth, 802.11, Infrared and Cable/Cradle
- Any data delivery mode: Offline synchronization, live connect push and online real-time
- End-to-end security: FIPS 140-2 compliant encryption modules
- Centralized IT control and device management
- Simplified Administration & Security Tools to set up server configurations and deploy and configure applications to mobile devices
- Simplified setup and rollout of GWAnywhere Client Deployment Wizard eases rollouts saving time and eliminating steps for the device user
- Independent deployment eliminates the need for third-party desktop sync software IT can preconfigure standard client settings (IP address, server name, default profile, encryuption key) prior to deployment
- Profile push lets IT administrators set profiles based on device connections (cradle profile, remote profile)
- Extensive device management and IT control features
- Addresses security concerns by government-approved FIPS 140-2 compliant algorithm, as well as RSA and AES encryption

Mission-critical collaboration applications like email, address books, calendars, etc. are essential to enable interaction and sharing of up-to-date and consistent information and ideas, to achieve effective time management, and to help organizations meet customer demands for high-quality service. Mobile workers are key participants in the success of the enterprise, yet they are often cut off from important information because they are unable to access a desktop or laptop computer. GWAnywhere™ offers a real-time synchronization solution that permits easy, cost-effective, anywhere-anytime access by mobile workers.

How GWAnywhere Works

Laptop
Smart phone
PDA
Internet   Firewall   GWAnywhere 2.0 Synchronization Platform   Domain controller   GroupWise server   Desktop connector

GWAnywhere is for you because:
- You belong to an ever-growing sector of mobile professionals who need secure real time "Over-the-Air" Synchronization and "Push Notification" (i.e., always on, always connected, always synchronized) of their email, calendar, contacts, and tasks on a handheld device
- You have a mobile workforce that needs immediate access to electronic information independent of time and place carrier or device
- You always wished to have a 100% native wireless solution for GroupWise that integrates with most mobile platforms and is easy to deploy and administer

System Requirements
Hardware/Software Requirements
- PII-300 server-class machine
- 128 MB base memory + 10 MB per concurrent user connection for GroupWise
- 120 MB free disk space for server software plus approximately 4 MB for each defined user(s)
- TCP/IP LAN connection
- Windows NT Server 4.0 w/ SP6a or higher or Windows 2000 SP2 or higher
- GroupWise Client 6.5.2

Supported Client Devices
- PalmOS 3.5 and greater with 8MB or more
- Windows CE Pocket PC, Pocket PC 2002, HPC 2000 devices running CE OS 3.0 and higher

Supported Email Server
- GroupWise 6.5 and higher
